

# The Hamonton Item.

DEVOTED TO THE INTERESTS OF HAMMONTON AND MAKING MONEY.

VOL. II.--NO. 31.

HAMMONTON, N. J., SATURDAY, AUGUST 16, 1873

\$2.00 PER YEAR

The following extracts from articles published in papers at Stockholm, Sweden, show plainly the difference of sight and judgment between partisans prejudiced by disappointment, malice and hate, and those who at a distance see things as they really exist. These extracts are made from papers published about the time or Grant's second inauguration; and we copy them as they have a bearing upon the feeling that exists, and is portrayed by certain of the Democratic press, in the present nonsense and jargon about a third term, which as we have heretofore said, amounts to nothing. But these extracts are worthy of a careful reading, as showing the impressions of distant, though not uninterested lookers-on in the affairs of our country:—

General Grant is to-day, for the second time, installed as President of the United States. We should view this event, and the electioneering contest now concluded from too limited a point of observation, were we to regard them as important only for the great Republic. Still less must we suppose that the question at issue was merely whether Grant and his adherents should retain their more or less lucrative posts, or be supplanted by Greeley and his friends. The contest was of far deeper significance. It involved neither more nor less than the most sacred interests of humanity. The two candidates for the Presidency, although both distinguished men, were individually of subordinate moment in the struggle. It was as the representatives of great and antagonistic principles that they assumed a position of such immense importance.

On the one part, in the contest for Grant, the cause at issue was the maintenance of that order of things which had been so dearly bought by the sanguinary civil war—the consolidation of the great Republic into one strong, undivided power, and the establishment of equal rights for all—irrespective of race or caste—as regards constitutional liberty, intellectual enlightenment, and material advantages. This was the programme of the Republican party.

On the other side, the Democratic party presented itself, having the majority of its adherents in the former slave States. This party put forward the well-meaning but weak and undecided Greeley, in order through him, to regain what they had lost by the war—the right of each State to enact, without control, local laws for the protection of privileges based on color, and thus to revive slave labor, and mental darkness. A contest for such opposite ends, and one assuming such dimensions—by whichever side the victory may be won—possesses more than temporary interest. Its consequences are not limited to the State most nearly affected, but they extend to every land, even to countries where the love of class distinctions and exclusive privileges has other foundations than that of the white man as contrasted with that of the negro or mulatto. The victorious principles, whichever their banner, run like an electric stream throughout the world, discharging sparks, and kindling thoughts and feelings that, otherwise, would have long lain dormant and concealed unconscious of their own existence. No civilized country can remain uninfluenced by such events.

SCIENCE FOR GIRLS.—It is generally supposed that women are not fit to be civil or mining engineers, that architecture is not in their line, and that the work of the surveyor, lover or draughtsman demands a species of precision and an assurance of accuracy not common to the female mind. But this, if altogether true, is the strongest argument in favor of these very studies. You may not mean to make a girl a civil engineer, and you may think her peculiarly unsuited for such a calling, and yet it may be that just in the measure of her unsuitness, it is desirable that she should pursue a course of preparation for it. The number of women to be met with in society, who would have been wiser and more efficient human beings had they been put through a good, hard course of plane trigonometry in girlhood, is very considerable. How comparatively few ladies one meets who can even tell how many parts there are in a triangle, and what their relations are, and as regards the famous demonstration touching the right-angled figure of that sort, we question if one female in a hundred could give any clear idea of it. Now, ignorance of this sort is largely responsible for many of the drawbacks and petty miseries of social life, and there is, consequently, sound reason for trying to cure it. Bad housekeeping, poor appreciation of the value of money, feebleness in dealing with matters of account and administration, and hence an injury to self-respect, and a constant damage to the interests and comforts of others, are disadvantages which ladies of imperfect education in this regard will recognize as among those which their detest has entailed. It may not be worth while to take a young girl so far in exact science as to fit her to shoulder a theodolite and survey a line of railroad, but most girls would certainly

be greatly benefited by going a long way toward acquiring such a capacity.

It should be borne in mind, in weighing the social merits of the problem, while many men are attracted by the weakness of this particular ignorance, many men—and perhaps a good share of those who begin by admiring—also despise it. It is in the nature of things that men should set a good value upon that to which they devote their lives, and the current habit of saying that "women cannot understand business" often covers a contempt which has this objection. This is, in an exceptional degree, a country of business. In other words, a greater proportion of the males are men of business than in other countries. Unless, then, it can be shown that the companions of their lives should be kept in ignorance of the affairs by which they live, American women ought to know more of business as a rule, than the women of other countries. As a matter of fact they usually know less; and hence the propriety of enucleating mathematical rather than classical culture for girls, or, rather, of favoring some discrimination in behalf of the former line of study. To be fit companions of their husbands, American women should have more of the knowledge that would enable them to understand, enter into, and sympathize with their husbands' vocations. Did they possess it, the cases of "incomprehensibility" of which we so often hear, might be less numerous. The danger sometimes apprehended that women, through a mastery of exact science, would become too hard and prosaic, is rather fanciful, we imagine, than real. Undoubtedly, to limit or concentrate thought on exact science may, as an incident of many advantages, create a certain number of prigs—but it is better to have a few prigs than many dunces, and judicious teachers of the best modern studies know very well how to throw in correctives which, like the lemon-salts or the jelly to game, will make up for the dryness or monotony of flavor of the mathematical banquet. Time was when it was thought it would make woman unlovable to teach them to read and write, and even now there are places in the world where such accomplishments are jealously guarded from female acquisition. Doubtless in the wisest time to come, it will be seen and owned that there is no limit to the proper acquisition of knowledge by either sex, save that which is set by the faculty of healthful assimilation.—N. Y. Times.

RULES FOR BUSINESS MEN.—From some published "Hints for Business Men" we extract the following in relation to advertising:

Take advantage of modern facilities. Use the means within your reach, and increase and multiply the means of information.

To compete successfully with a neighbor, participate in the facilities afforded to go ahead.

Don't depend on your own lungs alone; use the lungs of the press.

Make it known by printer's ink that you are prepared to do business.

Sell at small profits for cash, and make it known through the newspapers.

All that any honest, legitimate concern requires is fair judgment, close industry, unwavering integrity, superior workmanship, fair prices, and to do better by customers, if possible, than others in the same business—and give it publicity.

The Vineland people, having offered to give the Park at that place to a sewing machine company, provided said company will locate its buildings there, the Independent reminds them that, by a certain clause in the deed giving the tract to the corporation, that when diverted from its present use the title of the park becomes invested in the trustees of Princeton College. This attempt of the people of Vineland to donate what does not belong to them has a parallel in Scripture. A certain functionary carried the Saviour up into a high mountain, and pointing to the land spread out before them, offered to give him all if he would fall down and worship him. The impudence of the proposition consisted in the fact that he did not own a foot of the proffered territory.—W. J. Press.

ENTERPRISE.—The Murray Hill Publishing Company, 129 East 28th Street, have just made arrangements with "The Graphic Company" for a further 15,000 of that unique chromo, "Throw Physic to the Dogs," a copy of which they present to every purchaser of Dr. Foote's most popular book, "Plain Home Talk and Medical Common Sense." Both volume and chromo seem to have touched the mirth and sympathy of the people. It is to the credit of the Doctor that he designed the picture which Bispham so admirably painted. The Doctor is strongly "new school," and can afford to humorously illustrate on canvas the exclamation of Hamlet: "Throw Physic to the Dogs."—N. Y. Tribune.

The Texas cattle plague is raging in northwestern Missouri, where in the past two weeks it has carried off thousands of cattle. In Nodaway county alone, it has caused a loss of \$50,000.

NOTICE TO MARINERS.—Notice is hereby given that a log bell, located near the SW. corner of the sea wall of Fort Lafayette, east side of the Narrows, New York bay, will be operated during thick and foggy weather on and after the 1st day of August, 1873. The bell will be struck one blow, and after an interval of twenty seconds two blows, then, after an interval of twenty seconds, one blow; thus alternating, one and two blows at intervals of twenty seconds.

By order of the Light House Board.  
JOSEPH HENRY, Chairman.  
Washington, D. C., July 17, 1873.

Rear Admiral L. M. Goldsborough, commanding the Washington Navy Yard, has been ordered to the command of the Asiatic station, relieving Rear Admiral Jenkins. Admiral Goldsborough will sail from this country to take charge of the fleet early in November.
